

Washington, DC – U.S. Congressman Mike Pence released the following statement today after Senate Democrats introduced their latest version of climate legislation:

“Hoosiers want Congress to focus on policies that will create jobs. Instead, Democrats are continuing to push a job-killing national energy tax that will cap growth and trade jobs. This measure will force Americans to pay more for essentials like gas and electricity and force businesses to lay off workers; a point recently confirmed by the nonpartisan Congressional Budget Office, which said a cap-and-tax system will lead to higher unemployment and lower wages. This bill is essentially an economic declaration of war on middle America.

“In Indiana, we need an environmentally-responsible all-of-the-above energy plan that develops American resources, creates jobs, and promotes energy independence. House Republicans continue to offer that plan.”
